

# DICOM Conformance Statement

MedDream SendToPACS V. 2.4.0

Document version 2.5  
Date: 2022 08 04

# 1 Conformance Statement Overview

SendToPACS work as an image acquisition modality and as simple SCU. Its DICOM functionality allows to query the modality worklist and query/retrieve information. It supports the following network services:

### 3.2 Audience

This document is intended for the following:

- Potential users
- System integrators of medical equipment

It is assumed that the reader is familiar with the DICOM standard.

### 3.3 Remarks

DICOM, by itself, does not guarantee interoperability. However, the Conformance Statement facilitates a first level validation for interoperability between different applications supporting the same DICOM functionality.

This Conformance Statement is not intended to replace validation with other DICOM equipment to ensure proper exchange of information intended.

The scope of this Conformance Statement is to facilitate communication with other vendors' medical equipment. The Conformance Statement should be read and understood in conjunction with the DICOM Standard. However, by itself it is not guaranteed to ensure the desired interoperability and successful interconnectivity with existing DICOM systems.

The user should be aware of the following important issues:

- Test procedures should be defined to validate the desired level of connectivity.
- The DICOM standard will evolve to meet the users' future requirements.

### 3.4 Definitions and Terms

Informal definitions are provided for the following terms used in this Conformance Statement. The DICOM Standard is the authoritative source for formal definitions of these terms.

#### **Abstract Syntax**

the information agreed to be exchanged between applications, generally equivalent to a Service/Object Pair (SOP) Class.

Examples: Verification SOP Class, Modality Worklist Information Model Find SOP Class, Secondary Capture Image Storage SOP Class.

#### **Application Entity (AE)**

an end point of a DICOM information exchange, including the DICOM network or media interface software; i.e., the software that sends or receives DICOM information objects or messages.

#### **Application Entity Title**

the externally known name of an Application Entity, used to identify a DICOM application to other DICOM applications on the network.

#### **Application Context**

the specification of the type of communication used between Application Entities.

Example: DICOM network protocol.

#### **Association**

a network communication channel set up between Application Entities.

---

**Attribute**

a unit of information in an object definition; a data element identified by a tag. The information may be a complex data structure (Sequence), itself composed of lower level data elements.

Examples: Patient ID (0010,0020), Accession Number (0008,0050), Photometric Interpretation (0028,0004), Procedure Code Sequence (0008,1032).

**Information Object Definition (IOD)**

the specified set of Attributes that comprise a type of data object; does not represent a specific instance of the data object, but rather a class of similar data objects that have the same properties. The Attributes may be specified as Mandatory (Type 1), Required but possibly unknown (Type 2), or Optional (Type 3), and there may be conditions associated with the use of an Attribute (Types 1C and 2C).

Examples: MR Image IOD, CT Image IOD, Print Job IOD.

**Module**

a set of Attributes within an Information Object Definition that are logically related to each other.

Example: Patient Module includes Patient Name, Patient ID, Patient Birth Date, and Patient Sex.

**Negotiation**

first phase of Association establishment that allows Application Entities to agree on the types of data to be exchanged and how that data will be encoded.

**Presentation Context**

the set of DICOM network services used over an Association, as negotiated between Application Entities; includes Abstract Syntaxes and Transfer Syntaxes.

**Protocol Data Unit (PDU)**

a packet (piece) of a DICOM message sent across the network. Devices must specify the maximum size packet they can receive for DICOM messages.

**Query Key**

An input value for a query process. Query Keys denote the set of DICOM tags that are sent from the SCU to SCP and thus control the query result.

**Service Class Provider (SCP)**

role of an Application Entity that provides a DICOM network service; typically, a server that performs operations requested by another Application Entity (Service Class User).

Examples: Picture Archiving and Communication System (image storage SCP, and image query/retrieve SCP), Radiology Information System (modality worklist SCP).

**Service Class User (SCU)**

role of an Application Entity that uses a DICOM network service; typically, a client.

Examples: imaging modality (image storage SCU, and modality worklist SCU), imaging workstation (image query/retrieve SCU)

**Service/Object Pair (SOP) Class**

the specification of the network or media transfer (service) of a particular type of data (object); the fundamental unit of DICOM interoperability specification.

Examples: Ultrasound Image Storage Service, Basic Grayscale Print Management.

**Service/Object Pair (SOP) Instance**

an information object; a specific occurrence of information exchanged in a SOP Class. Examples: a specific x-ray image.

**Tag**

a 32-bit identifier for a data element, represented as a pair of four-digit hexadecimal numbers, the "group" and the "element". If the "group" number is odd, the tag is for a private (manufacturer-specific) data element.

Examples: (0010,0020) [Patient ID], (07FE,0010) [Pixel Data], (0019,0210) [private data element]

**Transfer Syntax**

the encoding used for exchange of DICOM information objects and messages.

Examples: JPEG compressed (images), little endian explicit value representation.

**Unique Identifier (UID)**

a globally unique "dotted decimal" string that identifies a specific object or a class of objects; an ISO-8824 Object Identifier.

Examples: Study Instance UID, SOP Class UID, SOP Instance UID.

**Value Representation (VR)**

the format type of an individual DICOM data element, such as text, an integer, a person's name, or a code. DICOM information objects can be transmitted with either explicit identification of the type of each data element (Explicit VR), or without explicit identification (Implicit VR); with Implicit VR, the receiving application must use a DICOM data dictionary to look up the format of each data element.

## 3.5 Abbreviations

The following acronyms are used in this document.

- AE — Application Entity
- AET — Application Entity Title
- DICOM — Digital Imaging and Communication in Medicine
- DIMSE — DICOM Message Service Element
- ILE — Implicit VR Little Endian
- ISO — International Standards Organization
- LUT — Look-up Table
- MWL — Modality Worklist
- Q/R — Query/Retrieve
- NEMA — National Electrical Manufacturers Association
- PDU — Protocol Data Unit
- SCP — Storage Class Provider
- SCU — Storage Class User
- SOP — Service Object Pair
- TCP/IP — Transmission Control Protocol/Internet Protocol
- TLS — Transport Layer Security
- UID — Unique Identifier
- VR — Value Representation

## 4 Networking

### 4.1 Implementation Model

SendToPACS is a Windows application that converts images, videos and PDF into DICOM Part 10 compliant files. Application will send these images and other DICOM images to remote equipment using the DICOM protocol. Application uses the DICOM Worklist Management service to populate information in generated DICOM datasets. It is logically divided into different DICOM Application Entities: Verification Client, Storage Client and Modality Worklist or Query/Retrieve client. Modality worklist client and Query/Retrieve client use the same Title. All AEs share the same main SendToPACS Title.

These Clients are basically modified third-party libraries build-in SendToPACS main JAVA application.

#### 4.1.1 Implementation Data Flow

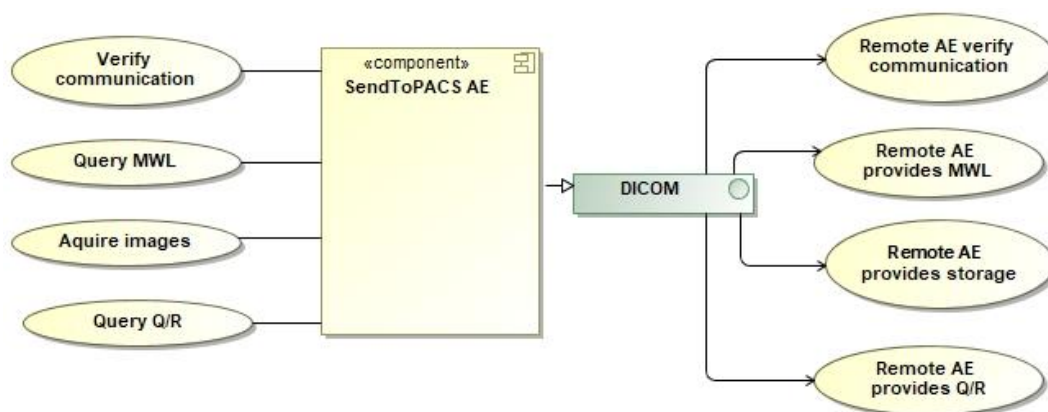

Figure 1. SendToPACS Data Flow Diagram

### 4.1.2 Functional Definition of AEs

#### 4.1.2.1 Functional Definition of Verification Client Application Entity

The Verification Client Application Entity is a Verification SCU. It connects to the presentation address given as the Called Application Entity Title and establishes an Association with Presentation Context of the Verification Service Class. A message is then shown to the operator detailing whether the association was established successfully or not.

#### 4.1.2.2 Functional Definition of Storage Client Application Entity

The Storage Client Application Entity is a Storage SCU. It connects to the presentation address given as the Called Application Entity Title and establishes an Association with Presentation Context of the Storage Service Class. Then it sends any supported DICOM Instances specified by the operator, over a Storage Request.

#### 4.1.2.3 Functional Definition of Modality Worklist Client Application Entity

The Modality Worklist Client Application Entity connects at the presentation address given as a Called Application Entity Title. It will propose Associations with Presentation Context for SOP Class of the Modality Worklist Service Class. When a WORKLIST-FIND request is sent, Modality Worklist Client AE will wait on the same Association for a C-FIND response and then release the Association. The operator is provided with a set of worklist items matching the query request.

#### 4.1.2.4 Functional Definition of Query/Retrieve client Application Entity

The Query/Retrieve Client Application Entity connects at the presentation address given as a Called Application Entity Title. It will propose Associations with Presentation Context for SOP Class of the Query/Retrieve Information Service Class. When a Query/Retrieve Information Model-FIND request is sent, Modality Query/Retrieve Client AE will wait on the same Association for a C-FIND response and then release the Association. The operator is provided with a set of information items matching the query request.

### 4.1.3 Sequencing of Real-World Activities

See Fig. 2 on the next page for illustration.

#### **Acquire images/videos/PDF/DICOM**

SendToPACS interface allows to select (drag and drop) multiple images, video, PDF or DICOM files for processing. DICOM files will be scanned for information about study and patient attributes to change.

#### **Enter or update patient and study data**

After selecting files, operator must fill information form about patient and study for (NON-DICOM) image/videos or PDF files. Information can be selected from MWL AE, Q/R AE, from scanned DICOM files or fill manually dialog form. SendToPACS allow to change patient and study information for DICOM files, that belongs the same study. Can fill similar form as NON-DICOM files.

#### **Store images**

The operator decides that the study contains enough information and start update and conversion.  
All DICOM files will be updated with changed attributes.  
All images and videos are checked (if need – change format or re-encode) before conversion to DICOM.  
If check succeeds – proceeds image, video and PDF file conversion to DICOM format.  
Finally, for DICOM files, if operator checked *Decompress* settings for remote AE - will apply pixel data decompression.  
If everything succeeds – start send DICOM files to remote Storage AE.

## 4.2 AE Specifications

### 4.2.1 Verification Client AE Specification

#### 4.2.1.1 SOP Classes

SendToPACS Verification Client Application Entity provides Standard Conformance to the following SOP Classes:

Table 2. SOP Classes for Verification Client AE

SOP Class Name	SOP Class UID	SCU	SCP
Verification SOP Class	1.2.840.10008.1.1	Yes	No

#### 4.2.1.2 Associations Policies

##### 4.2.1.2.1 General

The Verification Client AE will propose Association Requests for the Verification Service.

The Verification Client AE itself does not accept Associations.

The DICOM standard application context name for DICOM 3.0 is always accepted and proposed:

Table 3. DICOM application context name for Verification Client AE

Application Context Name	1.2.840.10008.3.1.1.1
--------------------------	-----------------------

##### 4.2.1.2.2 Number of Associations

Only a single Association is active at the moment. This is a direct result of the operator pressing a button dedicated to a particular Remote AE.

##### 4.2.1.2.3 Asynchronous Nature

The Verification Client does not support asynchronous communication (multiple outstanding transactions over a single Association).

##### 4.2.1.2.4 Implementation Identifying Information

The implementation information for this Application Entity is:

##### 4.2.1.3.1 Activity – Verify DICOM Communication

###### 4.2.1.3.1.1 Description and Sequencing of Activity

This activity is available as part of the configuration process. When the user has entered Title, IP and Port of a particular Remote AE press a nearby "Echo" button to immediately verify accessibility of that single AE.

Only the Verification SOP class is proposed. After the Remote AE accepts the association, a C-ECHO message is exchanged.

A message will appear stating results of the check.

###### 4.2.1.3.1.2 Proposed Presentation Contexts

Table 5. Accepted Presentation Contexts for Verification Client AE

Abstract Syntax		Transfer Syntax		Role	Ext. Neg.
Name	UID	Name List	UID List		
Verification SOP Class	1.2.840.10008.1.1	Implicit VR Little Endian	1.2.840.10008.1.2	SCU	None

### 4.2.1.3.1.3 SOP Specific Conformance for Verification SOP Class

SendToPACS Verification Client provides standard conformance to the DICOM Verification Service Class as a SCU.

## 4.2.2 Storage Client Application Entity Specification

### 4.2.2.1 SOP Classes

SendToPACS Storage Client Application Entity provides Standard Conformance to the following SOP Classes:

Non-DICOM (images, videos, PDF) files will be converted to Secondary Capture Image Storage or Encapsulated PDF Storage IOD. SendToPACS allows to change to other SOP Class UID, but final DICOM file content will be Secondary Capture Image Storage or Encapsulated PDF Storage IOD.

## 4.2.2.2 Associations Policies

### 4.2.2.2.1 General

The Storage Client AE proposes Association Requests for the Storage Service.

The Storage Client AE itself does not accept Associations.

The DICOM standard application context name for DICOM 3.0 is always accepted and proposed:

Table 7. DICOM application context name for Storage Client AE

Application Context Name	1.2.840.10008.3.1.1.1
--------------------------	-----------------------

### 4.2.2.2.2 Number of Associations

Only a single Association is active at the moment. DICOM instances are sent one at a time.

### 4.2.2.2.3 Asynchronous Nature

The Storage Client does not support asynchronous communication (multiple outstanding transactions over a single Association).

### 4.2.2.2.4 Implementation Identifying Information

The implementation information for this Application Entity is:

Table 8. DICOM Implementation Class and Version for Storage Client AE

Implementation Class UID	1.3.6.1.4.1.44316.3
Implementation Version Name	MDSSENDTOPACS

## 4.2.2.3 Association Initiation Policy

### 4.2.2.3.1 Activity – Send DICOM Instances

#### 4.2.2.3.1.1 Description and Sequencing of Activity

See Fig. 3 on next page for illustration.

SendToPACS always sends as many items as possible and the failure for every instance is indicated during process.

<sup>1</sup> ILE is offered together with each compressed syntax due to a corresponding requirement in the DICOM Standard. However, the Storage Client is incapable of converting between transfer syntaxes. The storage operation will only succeed if the SCP supports the original compressed syntax.

#### 4.2.2.3.1.3 SOP Specific Conformance for Storage SOP Classes

The associated Activity with the Storage Client is the storage of medical DICOM data specified by the operator over the network to the SCP. The Storage Client AE will indicate a failure if it is unable to send any of the specified instances. It always attempts to send all remaining instances despite of failure with a particular one.

During the conversion to DICOM operation, the DICOM instances are created with JPEG Baseline transfer syntax (for image) and one of compressed video syntaxes MPEG-2 or MPEG-4 (conversion support 1.2.840.10008.1.2.4.100, 1.2.840.10008.1.2.4.101, 1.2.840.10008.1.2.4.102, 1.2.840.10008.1.2.4.103) from Table 10.

During the PDF files conversion to DICOM, the DICOM instances are created with Explicit VR Little Endian.

**Operator can define other SOP Class UID by file extension (JPG, MP4, PDF), but conversion will be either Secondary Capture Image Storage or Encapsulated PDF Storage IOD.**

If the remote Storage SCP returns the compression-related context marked as unsupported, then the Client will abort the Association as it does not perform any transfer syntax conversions, too. **Storage SCPs compatible must support JPEG Baseline (Process 1), a particular compressed video transfer syntax (conversion support 1.2.840.10008.1.2.4.100, 1.2.840.10008.1.2.4.101, 1.2.840.10008.1.2.4.102, 1.2.840.10008.1.2.4.103) from Table 10 and Explicit VR Little Endian.**

Table 11. Storage Client C-STORE Response Status Handling Behavior

Service Status	Further Meaning	Error Code	Behavior
Success	Success	0000	The Composite SOP Instance was successfully received and stored in the system repository by the SCP. Send the next instance.
Warning	Data Element Coercion	B000	The SCP has corrected some Data Element(s) to avoid a conflict. Warning indication message might be copied to the application logs. Assume that the Instance has been stored successfully and send the next instance.
	Elements Discarded	B006	Some Data Element(s) were discarded by the SCP. Warning indication message might be copied to the application logs. Assume that the Instance has been stored successfully and send the next instance.
	Data Set does not match SOP Class	B007	Assume that the SCP has stored the Instance anyway. Warning indication message might be copied to the application logs. Send the next instance.
Error	Others	Others	Any unrecognized Error Code is considered an indication that the Instance wasn't stored. Error indication message might be copied to the application logs and an overall "failure" message will be displayed at the end of the operation. Send the next instance.

## 4.2.3 Modality Worklist Client Application Entity Specification

### 4.2.3.1 SOP Classes

Table 12. SOP Classes for Modality Worklist Client AE

SOP Class Name	SOP Class UID	SCU	SCP
Modality Worklist Information Model – FIND	1.2.840.10008.5.1.4.31	Yes	No

### 4.2.3.2 Associations Policies

#### 4.2.3.2.1 General

At a command from the operator, the Modality Worklist Client AE attempts to establish an association with the specified Remote AE. When the association is established, a C-FIND request is made to retrieve a worklist using the defined matching keys. The Modality Worklist Client waits for any C-FIND response. The established association remains active until a C-FIND response from the remote AE indicates the end of worklist items, or until a timeout period expires. The Modality Worklist Client AE itself does not accept Associations.

The DICOM standard application context name for DICOM 3.0 is always accepted and proposed:

Table 13. DICOM application context name for Modality Worklist Client AE

Application Context Name	1.2.840.10008.3.1.1.1
--------------------------	-----------------------

#### 4.2.3.2.2 Number of Associations

Only a single Association is active at the moment. The results are displayed to the operator only after receiving them from SCP entirely.

#### 4.2.3.2.3 Asynchronous Nature

The Modality Worklist Client does not support asynchronous communication (multiple outstanding transactions over a single Association).

#### 4.2.3.2.4 Implementation Identifying Information

The implementation information for this Application Entity is:

### 4.2.3.3 Association Initiation Policy

#### 4.2.3.3.1 Activity – Query Modality Worklist

##### 4.2.3.3.1.1 Description and Sequencing of Activity

The Modality Worklist SCU is governed by the WORKLIST configuration and search dialog that provides study and patient data for the next acquisition.

The dialog allows to enter patient ID, patient name (first name or last name, or middle name, or full name separated parts by “^”), date (Scheduled Procedure Step Sequence > scheduled procedure step start date), modality (Scheduled Procedure Step Sequence > Modality), station AE Title (Scheduled Procedure Step Sequence > Scheduled Station AE Title).

From the settings, operator can set scheduled AE Title, modality that will be set as default values in the dialog.

MWL Server AE, that do not return results with specific character set attribute – can set character set from settings (to correct result).

Wildcards (checkbox near input) can be checked to patient ID and patient name search parameters in the same dialog. This automatically will add wildcard symbols “\*” at the beginning and the end of search parameter. Some other MWL Servers prohibits wildcard or have other pattern – must uncheck wildcard checkbox and manually add “\*” or other wildcard symbols, to the search parameter.

Maximum search result is 1000 items.

After receiving search results, the application updates the list from which an existing patient can be chosen.

The operator can select an entry and press the button at the bottom at the list. This will update patient and study dialog form for further process.

Values for the **Query Key** column:

**X**

An exact match.

**F**

An exact match. If value is incorrect or missing some symbols due program conversion from server – will try to fix.

**P**

A partial match. Automatically adds leading and trailing wildcards. If both last name and first name is specified, then the pattern becomes \*last\*first\*.

**C**

An exact match. The value comes from configuration as default value, but can be changed by operator and become as an exact match (**X**).

Values for the **Imported** column:

**X**

Imported into the application and might be used in the resulting SOP instances. See also the table in [8.1.3 Attribute Mapping](#).

Can set Query/Retrieve Level for MWL storage AE: STUDY, SERIES, PATIENT, IMAGE. **Default value is empty and it should not require to set other level.** Operator can change this in search dialog "Model level".

### 4.2.4.2 Associations Policies

#### 4.2.4.2.1 General

At a command from the operator, the Query/Retrieve Client AE attempts to establish an association with the specified Remote AE. When the association is established, a C-FIND request is made to retrieve an information using the defined matching keys. The Query/Retrieve Client waits for any C-FIND response. The established association remains active until a C-FIND response from the remote AE indicates the end of items, or until a timeout period expires.

The Query/Retrieve Client AE itself does not accept Associations.

The DICOM standard application context name for DICOM 3.0 is always accepted and proposed:

### 4.2.4.3 Association Initiation Policy

#### 4.2.4.3.1 Activity – Query query/retrieve information

##### 4.2.4.3.1.1 Description and Sequencing of Activity

The Query/Retrieve SCU is governed by the WORKLIST configuration and search dialog that provides study and patient data for the next acquisition.

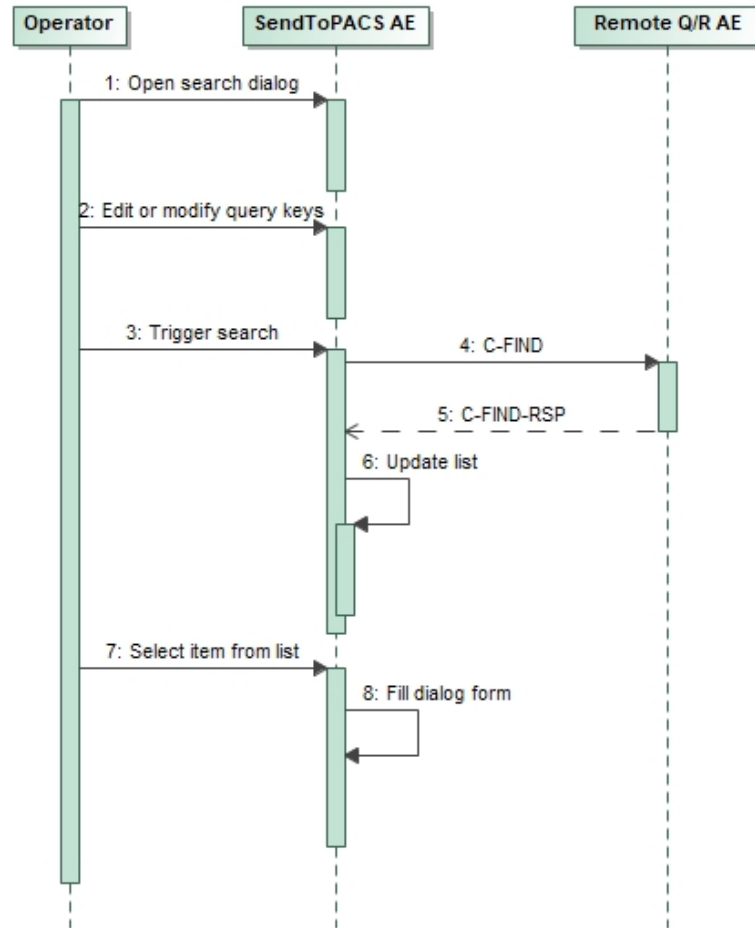

The dialog allows to enter patient ID and patient name (first name or last name, or middle name, or full name separated parts by "^").

Remote Q/R AE, that do not return results with specific character set attribute – can set character set from settings (to correct result).

Wildcards (checkbox near input) can be checked to patient ID and patient name search parameters in the same dialog. This automatically will add wildcard symbols "\*" at the beginning and the end of search parameter. Some other Storage

servers prohibits wildcard or have other pattern – must uncheck wildcard checkbox and manually add "\*" or other wildcard symbols, to the search parameter.  
 Maximum search result is 1000 items. Some record will be duplicates, but final result will be unique record (will collect and becomes smaller list).  
 After receiving search results, the application updates the list from which an existing patient can be chosen.  
 The operator can select an entry and press the button at the bottom at the list. This will update patient and study dialog form for further process.

## 4.3 Network Interfaces

DICOM Upper Layer over TCP/IP is supported.

---

### 4.3.1 Physical Network Interface

SendToPACS is indifferent to the physical medium over which TCP/IP executes. It inherits the TCP/IP stack from the operating system or, in case of Storage Client, from Java Runtime Environment.

### 4.3.2 Additional Protocols

No additional protocols are supported.

### 4.3.3 IPv4 and IPv6 Support

Only IPv4 is explicitly supported and was tested.

## 4.4 Configuration

### 4.4.1 AE Title/Presentation Address Mapping

The remote AE Titles and TCP ports are configurable in application settings.

#### 4.4.1.1 Local AE Titles

A single AE Title is shared among all local AEs and is configurable in application settings. Clients will use it as the Calling AE Title.

Table 27. AE Title Configuration Table

Application Entity	Default AE Title	Default TCP/IP Port
Verification Client	SENDTOPACS	—
Storage Client		
Modality Worklist Client		
Query/Retrieve Client		

A client chooses any free TCP/IP port offered by the Windows Sockets layer. The IP address is managed by the operating system and can be configured there.

#### 4.4.1.2 Remote AE Titles

AETs for Storage SCP, MWL SCP and Q/R SCP are configurable (MWL and Q/R is displayed in the same list). It's up to the operator to ensure that Remote AEs accept the configured local title (Calling AE Title).

### 4.4.2 Parameters

SendToPACS configuration parameters relevant to DICOM communication are as follows.

Table 28. Configuration Parameter Table

Parameter	Configurable?	Default Value
<i>General Parameters</i>		
Proposed Called AETs	Yes	Assigned by user
Proposed Calling AET	Yes	SENDTOPACS
Time-out waiting for TCP/IP connect	No	10s
Maximum PDU size the AE can receive	No	16384
Maximum PDU size the AE can send	No	16384

Time-out waiting for a DIMSE-RSP	No	0s
Time-out waiting for a DIMSE-RQ	No	0s
Time-out waiting for receiving A-ASSOCIATE-AC	No	10s
Time-out waiting for receiving A-RELEASE-RP	No	50ms

---

Time delay for Socket close after sending A-ABORT	No	0s
<i>Verification Client</i>		
Client execution time (application limits client)	No	10s
<i>Storage Client AE</i>		
Pack Command and Data PDVs in one PDU	No	False
Client execution time to process one study (application limits client)	No	7200s
<i>Modality Worklist Client</i>		
Client execution time to receive data (application limits client)	No	10s

---

## 5 Media Interchange

SendToPACS does not support Media Interchange.

---

## 6 Support of Extended Character Sets

SendToPACS allows to set and change character set to converting SOP instance to DICOM format in general settings. Operator, during configuration, can set Storage SCP, MWL SCP and Q/R SCP (MWL and Q/R is displayed in the same list) character set. This will represent as default character set in case MWL or Q/R SCP do not provide with result.

For Storage SCP, character set will be set as default to fill patient and study information form. Operator can change character set for own purpose and send SOP Instance to Storage SCP with different character set.

**Recommended to set correct and constant specific character set for Storage SCP.**

Supported character set:

- <empty> - Default repertoire (no specific character set will be added),
- ISO\_IR 100 - Latin alphabet No. 1,
- ISO\_IR 101 - Latin alphabet No. 2,
- ISO\_IR 109 - Latin alphabet No. 3,

## 7 Security

The DICOM capabilities of SendToPACS do not support any specific security measures.

It is assumed that the Software is used within a secured environment. It is assumed that a secured environment includes at a minimum:

- firewall or router protections to ensure that the Software only has network access to approved external hosts and services;
- appropriate secure network channels (e.g. such as a Virtual Private Network) for any communication with external hosts and services outside the locally secured environment.

Other network security procedures such as automated intrusion detection may be appropriate in some environments.

Additional security features may be established by the local security policy and are beyond the scope of this conformance statement.

### 8.1 IOD Contents

Abbreviations used for presence of values (PoV):

**VNAP**

Value Not Always Present (attribute has zero length if no value is present) – Applicable for Type 2, 2C.

**ANAP**

Attribute is not always present – Applicable for Type 3

**ALWAYS**

Attribute is always present with a value – Applicable for Type 1

**EMPTY**

Attribute is sent without a value – Applicable for Type 2

Abbreviations used for sources of data:

**USER**

Attribute value is generated from user input.

**AUTO**

Attribute value is generated automatically.

**MWL**

Attribute value is the same as the value received using a DICOM service such as Modality Worklist, Modality Performed Procedure Step, etc.

**Q/R**

Attribute value is the same as the value received using a DICOM service such as Query/Retrieve.

**CONFIG**

Attribute value is a configurable parameter.

#### 8.1.1 File Meta Information

*Table 29. DICOM File Meta Information*

Tag	Type	VR	Name	Description	PoV	Source
—	1	—	File Preamble	A fixed 128-byte field available for Application Profile or implementation specified use. If not used by an Application Profile or a specific implementation all bytes shall be set to 00H.	ALWAYS	AUTO
—	1	—	DICOM Prefix	Four bytes containing the character string "DICM". This Prefix is intended to be used to recognize that this File is or not a DICOM File.	ALWAYS	AUTO
(0002,0000)	1	UL	File Meta Information Group Length	Number of bytes following this File Meta Element (end of the Value field) up to and including the last File Meta Element of the Group 2 File Meta Information	ALWAYS	AUTO
(0002,0001)	1	OB	File Meta Information Version2021	This is a two bytes field where each bit identifies a version of this File Meta Information header. In version 1 the first byte value is 00H and the second value byte value is 01H.  <i>Always "00\01"</i>	ALWAYS	AUTO
(0002,0002)	1	UI	Media Storage SOP Class UID	Uniquely identifies the SOP Class associated with the Data Set.  <i>For image/videos "1.2.840.10008.5.1.4.1.1.7"</i> <i>For PDF "1.2.840.10008.5.1.4.1.1.104.1"</i>  <i>Operator can define different SOP Class UID and will own risk, but final DICOM file content will be</i>	ALWAYS	AUTO, CONFIG

				<i>Secondary Capture Image Storage or Encapsulated PDF Storage IOD.</i>		
(0002,0003)	1	UI	Media Storage SOP Instance UID	Uniquely identifies the SOP Instance associated with the Data Set placed in the file and following the File Meta Information.  <i>Duplicates (0008,0018) — see Table 37</i>	ALWAYS	AUTO
(0002,0010)	1	UI	Transfer Syntax UID	Uniquely identifies the Transfer Syntax used to encode the following Data Set. This Transfer Syntax does not apply to the File Meta Information.  <i>Constant value that depends on instance type and configuration:</i>  <i>for image — "1.2.840.10008.1.2.4.50"</i>  <i>for videos — one of "1.2.840.10008.1.2.4.100", "1.2.840.10008.1.2.4.101", "1.2.840.10008.1.2.4.102", "1.2.840.10008.1.2.4.103" as per configuration</i>  <i>for PDF — "1.2.840.10008.1.2.1"</i>	ALWAYS	AUTO, CONFIG
(0002,0012)	1	UI	Implementation Class UID	Uniquely identifies the implementation that wrote this file and its content. It provides an unambiguous identification of the type of implementation that last wrote the file in the event of interchange problems. It follows the same policies as defined by PS3.7 (association negotiation).  <i>Always "1.3.6.1.4.1.44316.3"</i>	ALWAYS	AUTO
(0002,0013)	3	SH	Implementation Version Name	Identifies a version for an Implementation Class UID (0002,0012) using up to 16 characters of the repertoire identified in Section 8.5. It follows the same policies as defined by PS3.7 (association negotiation).  <i>Always "MDSENDTOPACS"</i>	ALWAYS	AUTO

### 8.1.3 Usage of Attributes from Received IODs

The usage of attributes of Modality Worklist IODs is described in chapter 4.2.3.3.1 Activity – Query Modality Worklist. The usage of attributes of Query/Retrieve IODs is described in chapter 4.2.4.3.1 Activity – Query query/retrieve information.

### 8.1.4 Attribute Mapping

The following attributes will be mapped from Modality Worklist to created SOP Instances:

New – indicates, that field will be added as new from MWL.

Exist – attribute will be added even MWL do not exist. If MWL has attributes – will be added.

The following attributes will be mapped from Query/Retrieve information to created SOP Instances:

*Table 44. Attribute Mapping from Q/R*

Attribute	Instance IOD		MWL	
Exist	(0010,0010)	Patient's Name	(0010,0010)	Patient's Name
Exist	(0010,0020)	Patient ID	(0010,0020)	Patient ID
Exist	(0010,0030)	Patient's Birth Date	(0010,0030)	Patient's Birth Date
Exist	(0010,0040)	Patient's Sex	(0010,0040)	Patient's Sex

Exist – attribute will be added even Q/R do not exist.

### 8.1.5 Coerced/Modified Fields

Attributes from MWL, can be modified manually after importing from MWL.

### 8.1.6 Additional fields

Can set additional attribute via general settings "Additional Info tag". Can define private attribute (will set VR=LT) and other known DICOM standard attribute.

User can add this value to non-DICOM files in the main file list "Additional info" column.

If value is valid – will add attribute with user value during conversion to DICOM file.

---

## **8.2 Data Dictionary of Private Attributes**

SendToPACS does not define any private attributes. User can set private attribute via general settings "Additional Info tag". Tag VR will be LT.

## **8.3 Coded Terminology and Templates**

SendToPACS does not use any custom coded terminology.

## **8.4 Greyscale Image Consistency**

Not applicable.

## **8.5 Standard Extended / Specialized/ Private SOP Classes**

SendToPACS does not use any standard extensions.

## **8.6 Private Transfer Syntaxes**

No Private Transfer Syntax is supported.
